2014 NATIONAL COMMUNITY HEALTH WORKER ADVOCACY SURVEY

A project of the
University of Arizona,
Arizona Prevention Research Center

The 2014 National Community Health Worker Advocacy Survey (NCHWAS) is the largest on-line survey of Community Health Workers (CHW) conducted to date. NCHWAS represents the voices of approximately 1,767 CHWs from 45 United States and 4 US territories. Data gathered through NCHWAS is intended to be 'open source' and used for CHW workforce development and sustainability.

The NCHWAS aims to describe (1) the state of CHWs as a professional field and (2) the impact of CHW community advocacy on community engagement to address health disparities. Although Community Health Workers or CHWs go by a variety of titles including, *Promotora de Salud*, Community Health Representatives, Community Health Aides, Peer Educators, and Patient Navigators to name just a few, we use the term Community Health Worker or CHWs as the umbrella term to describe the workforce.

CHW workforce data collected by NCHWAS includes; gender, race/ethnicity, education, salary, experience, work environment, training, and health and social areas of focus, professional affiliation and leadership, engagement in Affordable Care Act outreach and enrollment, CHWs advocacy efforts and impact on the social determinants of health and CHWs -led initiatives to sustain and advance the CHW workforce.

The anonymous, on-line survey was distributed to CHWs through local, state, and national CHW professional associations, programs, and allies during the months of February and May of 2014 and was available in English, Spanish and Korean languages. Data reported here are not intended for publication in academic journals.

This report represents preliminary data for **LOUISIANA**.

A total of 25 individuals initiated the on-line survey, of which 25 self-identified as a CHW of whom 25 had not taken the survey in the previous 12 months and were eligible to complete the survey. All reports include data for CHWs who initiated the survey and may or may not have completed the entire survey thus the number of participants fluctuates by question as responses were not required for every question.

This study was supported by Centers for Disease Control and Prevention
(Grant U48DP001925) and should be cited as:

National Community Health Worker Advocacy Survey: 2014 Preliminary Data Report for Louisiana.

CHW Professional Development

Level of Agreement with the *American Public Health Association* definition of a Community Health Worker

A Community Health Worker (CHW) is a frontline public health worker who is a trusted member of and/or has an unusually close understanding of the community served. This trusting relationship enables the CHW to serve as a liaison/link/intermediary between health/social services and the community to facilitate access to services and improve the quality and cultural competence of service delivery.

A CHW also builds individual and community capacity by increasing health knowledge and self-sufficiency through a range of activities such as outreach, community education, informal counseling, social support and advocacy text.

Question	Strongly Disagree	Disagree	Agree	Strongly Agree	Total Responses
Level of agreement	2 (11%)	0 (0%)	5 (26%)	12 (63%)	19

CHW Perceptions on Opportunities for Better Pay in Current Place of Employment

CHW Advocacy and Leadership Curriculum

Acción Para La Salud (Action for Health)

The Acción Para La Salud core research project aims to determine the effectiveness of integrating community advocacy into community health worker (CHW) outreach and education activities in increasing community-driven policy change related to chronic disease prevention.
